...

Pitman's book takes a step-by-step approach that builds on prior sections so you don't jump into topics like expectation and distributions without adequate preparation. Unlike Casella and Berger, Pitman's book has a well-organized appendix so you can check other sections of the book for more background when needed.

SOLUTION: We want to find the probability of the events  $E_1 = A \cap B \cap C^c = ABC^c$ ,  $E_2 = A \cap C \cap B^c$ , and  $E_3 = B \cap C \cap A^c$ . Each of these events  $E_i$  represents exactly two of  $A$ ,  $B$ , or  $C$  occurring. Note that these events have no intersection.
