Sirius, also called Alpha Canis Majoris or the Dog Star, brightest star in the night sky, with apparent visual magnitude −1.46. It is a binary star in the constellation Canis Major. The bright component of the binary is a blue-white star 25.4 times as luminous as the Sun.

Sirius | Facts & Location | Britannica

Sirius (/ˈsɪriəs/, designated α Canis Majoris (Latinized to Alpha Canis Majoris, abbreviated Alpha CMa, α CMa)) is the brightest star in the night sky.Its name is derived from the Greek word Σείριος Seirios "glowing" or "scorching". With a visual apparent magnitude of −1.46, Sirius is almost twice as bright as Canopus, the next brightest star.

Sirius - Wikipedia

Sirius, also known as the Dog Star or Sirius A, is the brightest star in Earth's night sky. The name means "glowing" in Greek — a fitting description, as only a few planets, the full moon and the...

Sirius: Brightest Star in Earth's Night Sky | Space

At the time it was first proposed by Robert Temple in his book The Sirius Mystery, the fact that the Dogon tribe of West Africa had knowledge of star systems that even the modern world had yet to confirm, combined with their creation stories of entities from other worlds in this star system, was proof to some that humanity was indeed visited in the distant past by extraterrestrials who then sparked civilization as we know it by teaching the knowledge and wisdom of the universe.
