Optics is the branch of physics that studies the behaviour and properties of light, including its interactions with matter and the construction of instruments that use or detect it. Optics usually describes the behaviour of visible, ultraviolet, and infrared light. Because light is an electromagnetic wave, other forms of electromagnetic radiation such as X-rays, microwaves, and radio waves ...

Theory And Practoces Of Optics And Refraction Ak Khurana ...

Coherent optical data processing became a serious subject for study in the 1950s, partly because of the work of a French physicist, Pierre-Michel Duffieux, on the Fourier integral and its application to optics, and the subsequent use of communication theory in optical research. The work was initiated in France by André Maréchal and Paul Croce, and today a variety of problems can be attempted by the technique.
